

If You Have High Blood Pressure Listen Up!

"NEW - Advanced Nutraceutical Stops This Silent Killer Before It Destroys YOU...And Those You Love!"

*"If your blood pressure readings are greater than 140 mm Hg systolic or greater than 90 mm Hg diastolic -- that is, **140 over 90** then this is **CRITICAL** to your health and well being..."*

Dear Friend,

You are about to discover how 8 little-known yet amazingly powerful herbs can quickly **reduce your blood pressure** and dramatically lower your risk of life-threatening illness and give you back the health and vitality you deserve!

Before we get to that let me ask you this...

Do you know the 5 things that you CAN prevent IF you take your health into your own hands today?

Heart Attack, Stroke, Kidney Damage, Blindness, and Death --

If that seems a little drastic...think again!

High Blood Pressure AKA Hypertension can do all of those and more.

Imagine what would happen to you if you left your high blood pressure (**hypertension**) unchecked for too long...

Worse yet, think about --

What would happen to your family?

It would literally ruin them emotionally and maybe even leave them in dire financial constraints if you weren't prepared. That could cripple your children or spouse's chances for happiness and success that you and I both know, is **one of the most important things we can provide for them in life.**

Here's the thing...

Prior to today it has always been commonplace to run to your doctor when you're already not feeling well and get your blood pressure checked.

Seems like a natural thing to do and you're right it is! You should go to your doctor but not just when you're not feeling well.

Upon discovering your elevated blood pressure...your doctor may tell you to go to the hospital for observation (*not good*) or more often he or she may...prescribe some type of **blood pressure medication** that you will have to stay on **for the rest of your life** or until it stops working for you.

Drugs Are Not The Answer

The thing is, most of these prescription drugs can potentially cause negative side-effects like...

- **Reduced urination**
- Muscle weakness, cramping
- **Irregular heart beat**
- Fatigue, dizziness
- **Depression**
- Impotence
- **Liver damage**
- Rapid heartbeat
- **Headache**
- Fluid retention
- **Impotence**
- Gastrointestinal problems
- **Body hair growth**
- Numbness or tingling in hands
- **Nausea**
- *And the list goes on and on...*

The longer you stay on these blood pressure medications the higher your chances of developing something else as a side-effect of the **damaging chemical reactions** happening within your body.

Now don't feel bad...

You are not the only one with this problem. over 50 million people in the US alone have high blood pressure and internationally it's at **pandemic proportions!**

But finally there's good news...

It's called --

Heart Plus: A Proven Herbal Solution to Reduce Your High Blood Pressure FAST!

Heart Plus is specially formulated with **valuable extracts** to promote cardiovascular health and **increase longevity** by lowering the risk of heart problems caused by hypertension and a high level of cholesterol.

These all-natural ingredients are proven to reduce your blood pressure naturally and improve your overall cardio-vascular system, giving you back the health and vitality that you've probably not seen in years!

It also helps:

- **Strengthen the heart muscle** - Ensuring that your heart is healthy and can efficiently pump oxygen rich blood to the rest of your body keeping it young and strong.
- **Increase blood circulation** - In order to keep your body performing at peak efficiency...your blood vessels must remain open and allow blood to freely flow and feed your muscles and organs.
- **Regularize the heartbeat** - Normalizing your heartbeat is essential to limiting the negative effects of stress and other blood pressure increasing stimuli. Not doing this can quickly cause your blood pressure to skyrocket.

To understand what's going on, you need to understand your body or rather how high blood pressure works.

What Is High Blood Pressure?

Blood pressure is the force in the arteries when the heart beats (systolic pressure) and when the heart is at rest (diastolic pressure). It's measured in millimeters of mercury (mm Hg).

High blood pressure (or hypertension) is defined in an adult as a blood pressure greater than or equal to 140 mm Hg systolic pressure or greater than or equal to 90 mm Hg diastolic pressure.

High blood pressure **directly increases the risk of coronary heart disease** (which leads to heart attack) and stroke, especially when it's present with other risk factors.

High blood pressure can occur in children or adults, but it's more common among people over age 35. It's particularly prevalent in African Americans, middle-aged and elderly people, obese people,

heavy drinkers and women who are taking birth control pills.

It may run in families, but many people with a strong family history of high blood pressure never have it. People with diabetes mellitus, gout or kidney disease are more likely to have high blood pressure, too.

What Causes High Blood Pressure?

In 90 to 95 percent of high blood pressure cases, the cause is unknown. *In fact, you can have high blood pressure for years without knowing it.*

That's why it's the "silent killer" - it creeps up on you.

When the cause is unknown, you have what's called essential or primary hypertension. Factors that may lead to high blood pressure in the remaining 5-10 percent of cases, which are known as secondary hypertension, include:

- Kidney abnormality
- A structural abnormality of the aorta (large blood vessel leaving the heart) existing since birth
- Narrowing of certain arteries

These problems can usually be corrected. For example, doctors can repair a narrowed artery that supplies blood to a kidney. Most of these problems can be ruled out by a careful history, a physical examination and a few tests. Special tests are sometimes needed, but you don't usually have to stay in the hospital.

How Does High Blood Pressure Develop?

Your heart pumps blood through the body's arteries. The large arteries that leave your heart taper into smaller arteries called arterioles. The arterioles then taper into smaller vessels called capillaries, which supply oxygen and nutrients to all the organs of your body. The blood then returns to your heart through the veins.

Certain nerve impulses cause your arteries to dilate (become larger) or contract (become smaller). If these vessels are wide open, blood can flow through easily. If they're narrow, it's harder for the blood to flow through them, and the pressure inside them increases. Then high blood pressure may occur.

When this happens, your heart becomes strained and **blood vessels may become damaged**. Changes in the vessels that supply blood to your kidneys and brain may cause these organs to be affected.

Your heart, brain and kidneys can handle increased pressure for a long time. That's why you can live for years without any symptoms or ill effects. **But that doesn't mean it's not hurting you.**

High blood pressure is a major risk factor for stroke, heart attack, heart failure and kidney failure.

What Does High Blood Pressure Do To Your Body?

High blood pressure adds to the workload of your heart and arteries. Your heart must pump harder, and the arteries carry blood that's moving under greater pressure. If high blood pressure continues for a long time, your heart and arteries may not work as well as they should. Other body organs may also be affected.

There is increased risk of stroke, congestive heart failure, kidney failure and heart attack. When high blood pressure exists with obesity, smoking, high blood cholesterol or diabetes, the risk of heart attack or stroke increases several times.

What Heart Plus Can Do For You:

- Quickly Lower your blood pressure to normal ranges.
- **Clear arterial blockages by protecting against dangerous plaque build up and helping to prevent blood clotting, strokes and heart attacks.**
- Improve your cardiovascular health by protecting strengthening your cardiac muscle.
- **Improves blood flow through your arteries.**
- Soothes nervous tension and reduces the inflammation caused by stress.
- **Increases overall body circulation to the rest of your vital organs and muscles.**
- Improve the pumping ability of the heart and normalizes heart beat.
- **Increases your energy levels and feelings of well being.**

What You Can Do Now...

FACT: *High blood pressure is a lifelong disease.*

It can usually be controlled but not cured.

Once you begin to manage it and start a treatment program, maintaining a lower blood pressure is easier. By controlling your high blood pressure, you'll lower your risk of diseases like stroke, heart attack, heart failure and kidney disease.

You can do it!

The first thing to do is to have your blood pressure checked. If you have high blood pressure, you can do a lot to reduce it. Work with your doctor to determine the best treatment for you.

It may include reducing the fat (particularly saturated fat) in your diet, eating less salt, and changing your lifestyle by losing weight and getting regular physical activity.

Quitting smoking is also important to reduce your overall risk for heart attack and stroke.

Your doctor may recommend reducing how much alcohol you drink.

Many medicines and herbal supplements can also help reduce and control high blood pressure but there's a problem with just using any old medication or herb...

You see...It's been long known truth that there are natural herbs that are many times **more powerful than any single medication** created by drug companies for profit and they have little or no side-effects.

But, most other "so-called" blood pressure reducing pills, are a bunch of things that you can either throw together from your kitchen cupboard or they're downright dangerous to use!

However, **Heart Plus has been scientifically formulated** with potent natural herbal ingredients that are proven to lower your blood pressure FAST!

Ingredients:

Radix Salvia Miltiorrhiza Bunge Labiatae - Increases micro-circulation and reduces stress impact.

Fructus Ligustrum Lucidum - Lowers cholesterol and increases coronary blood-flow.

Spica Prunella Vulgaris -

Radix Scutellaria Baicalensis - Anti-inflammatory used to reduce the inflammation caused by of blood pressure increasing stress and environmental

Cortex Cinnamomum Cassia

Semen Cassia Obtusifolia

**Semen Prunus Armeniaca
Fructus Morus Alba**

These individual ingredients combined work synergistically to **attack the problem from all of the different angles** that cause high blood pressure and put you at risk for heart attack or stroke.

Finally, the choice is up to you! You can take control of your health and **live a healthier and more vibrant life** -OR- you can settle for a life of prescription dependency and drug induced side-effects.

All it takes is: 1 capsule twice a day, in the morning and 1 at night.

Do NOT take during pregnancy!

PLUS you also get our --

100% Satisfaction Guarantee!

If you are not completely satisfied with Heart Plus, for any reason then you can return the unused portion of your bottle and receive a prompt and courteous refund of your entire purchase price! **Yes a 100% refund because we're that confident that if you try Heart Plus you're going to love it!**

A 30 Day supply is 60 capsules or 1 bottle.

The rest is up to you! Please take action and take your health into your own hands now. No one else can do it for you.

Get your 30 Day supply today!
